

Problem Statement

Topic: Interview Trainer Agent

The Challenge

Preparing for job interviews is often difficult due to lack of structured guidance, relevant practice questions, and personalized feedback. Candidates struggle to identify role-specific expectations, technical requirements, and behavioral patterns followed by companies.

Key Functionalities

- Generates tailored interview questions based on user profile, experience level, and job role.
- Retrieves real-world interview data including technical, HR, and behavioral questions using RAG.
- Provides model answers and improvement suggestions for better performance.
- Supports both technical and soft skill evaluation.
- Allows users to input resume or job title for personalized preparation.
- Builds confidence through structured and intelligent interview practice.

The Objective

To develop an AI-powered Interview Trainer Agent that delivers personalized interview preparation, improves candidate performance, and increases success rate in competitive hiring environments.

Technology Requirement

The solution must be built using IBM Cloud Lite services and IBM Granite models for AI processing and deployment.
